## DETAILED ACTION

### *Specification*

1. The abstract of the disclosure is objected to because the word "retrived" in line 7 is misspelled. Correction is required. See MPEP § 608.01(b).

### *Claim Rejections - 35 USC § 102*

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-13 are rejected under 35 U.S.C. 102(b) as being anticipated by Suzuki et al. (6,150,598).

Suzuki et al. disclose the claimed invention, wherein the reference discloses a waveform generating method comprising the steps of: storing a plurality of partial waveforms in a partial waveform memory as discussed in the abstract and column 10, lines 4-8; storing property information on respective ones of the partial waveforms stored in the partial waveform memory, in a property information memory as discussed in column 10, lines 23-31; column 11, lines 25-36; and column 11, line 65 through column 12, line 4; retrieving the property information memory according to inputted sounding control information to read out a partial waveform having property information corresponding to the sounding control information as discussed in column 19, lines 26-35 and column 20, lines 25-33; processing the readout partial waveform according to the property information and the sounding control information and generating a waveform corresponding to the sounding control information as disclosed in the abstract and discussed in column 20, lines 34-63. Suzuki et al. also disclose a performance data processing method comprising the step of: comparing characteristics of

respective ones of notes included in performance data with the property information stored in the property information memory to detect an optimum partial waveform. for a characteristic of each of the notes as seen through figure 2. Suzuki et al. further includes a step of generating tones according to a tempo clock and reproducing performance information based on a tempo clock as discussed in column 42, lines 24-43. Suzuki et al. also disclose an apparatus for performing the method steps including: a partial waveform memory; a database that stores property data; and a retrieving device as can be seen in figures 2, 4, 22, and 23. The steps of storing include extracting waveform data and recording the data.

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The following references are related to the presently claimed invention:
